## Typenschlüssel

## Fan type code

### RF E 150

Nennweite / Impeller diameter  
100, 125, 150

Motorversion / Motor type  
E = Einphasenwechselstrom  
Single-phase A.C.  
G = Einphasengleichstrom  
Single-phase D.C.

## Eigenschaften und Ausführung

Die Rohrventilatoren der Baureihe RFE und RFG sind kompakte Mixed-Flow Ventilatoren mit integriertem Nachleitrad. Beide Seiten können direkt in die Rohrleitung eingesteckt und mit Schnellverbindern fixiert werden.

### Gehäuse

Die Gehäuse bestehen aus gespritztem schwarzem Polypropylen. Sie sind in den Baureihen so aufgebaut, daß sich die nächst kleinere Baugröße durch Aufstecken von Übergangsflanschen auf das Gehäuse ergibt. Dadurch ist eine günstige Lagerhaltung möglich.

Die Ventilatoren entsprechen der Schutzart IP54.

### Motor

**RFE** - Es werden 3-stufige Einphasen-Wechselstrom-Motoren eingesetzt.

**RFG** - Es werden elektronisch kommutierte Gleichstrommotoren mit geringer Stromaufnahme verwendet.

### Regelgerät

**RFE** - Zur einfachen Regelung kann ein Stufenschalter eingesetzt werden. Für feinere Regelungen können die üblichen Regelgeräte für Einphasen-Wechselstrom verwendet werden.

### Luftleistungskennlinien

Die Kennlinien in diesem Katalog wurden mittels einem saugseitigen Kammerprüfstand entsprechend der DIN 24 163 in Einbautart B aufgenommen und zeigen die statische Druckerhöhung  $\Delta p_{st}$  als Funktion des Volumenstroms.

### Montage

Die RFE/G-Ventilatoren werden direkt mit Rohrschnellverbindern in das Lüftungsrohr eingebaut. Durch ihre geringe Bauhöhe sind sie ideal für den Einbau in Zwischendecken geeignet.

## Design features

Series RFE and RFG tube fans are Mixed-Flow fans fans with integrated guide vane. Both sides of the fan can be fitted into the tube and can be fixed with fastening clamps.

### Casing

The housing is made of injection-mould black PP. The fan series is designed in a way that smaller diameters can be achieved by fitting reduction flanges to the standard diameter fans.

The fans have protection class IP 54

### Motor

**RFE** - 3-step single-phase motors are fitted.

**RFG** - Fans are driven by electronically commutated DC-motors with low power consumption.

## Control unit

**RFE** - For simple set-ups a step switch is sufficient. A more sensitive control can be achieved by standard controllers for single phase AC.

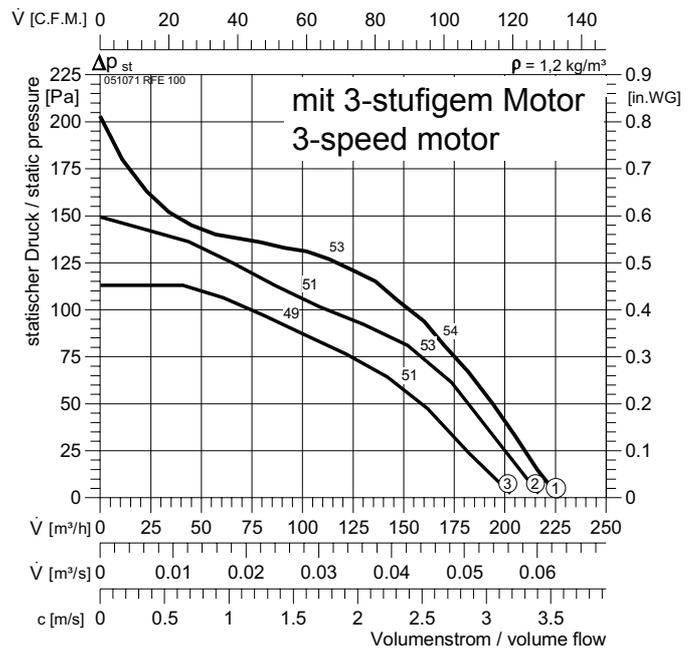

## Fan performance curves

The performance curves in this catalogue have been established using the inlet test method in a test chamber according to DIN 24 163, mounting position B. The curves indicate the static pressure increase  $\Delta p_{st}$  as a function of the volume flow.

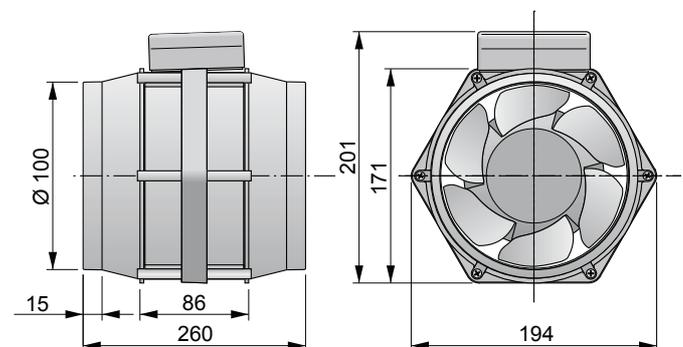

## Installation

The RFE/G-type inline tube fans are directly mounted into the tube and fixed by clamps. Due to it's very low height the RF-type is ideal for use in false ceilings.

100, 150

Rohrventilator / Inline tube fan

### Eigenschaften und Ausführung

Rohrventilatoren der Baureihe RF sind Radial-Ventilatoren mit saug- und druckseitig rundem Röhranschluß. Beide Seiten können direkt in die Rohrleitung eingesteckt und mit Schnellverbindern fixiert werden.

#### Gehäuse

Die Gehäuse bestehen senzimiervverzinktem Stahlblech. Die Ventilatoren entsprechen der Schutzart IP44.

#### Motor

RF - Es werden 3-stufige Einphasen-Wechselstrom-Motoren eingesetzt.

#### Regelgerät

RF - Zur einfachen Regelung kann ein Stufenschalter eingesetzt werden. Für feinere Regelungen können die üblichen Regelgeräte für Einphasen-Wechselstrom verwendet werden.

#### Montage

Die RF-Ventilatoren werden direkt mit RSV Rohrschnellverbindern in das Lüftungsrohr eingebaut. Durch ihre geringe Bauhöhe sind sie ideal für den Einbau in Zwischendecken geeignet.

#### Luftleistungskennlinien

Die Kennlinien in diesem Katalog wurden mit einem saugseitigen Kammerprüfstand entsprechend der DIN 24 163 in Einbautart B aufgenommen und zeigen die statische Druckerhöhung  $\Delta p_{ia}$  als Funktion des Volumenstroms.

### Schallentwicklung

In den Luftleistungskennlinien ist der A-bewertete Freiausblas-Schalleistungspegel  $L_{WA6}$  angegeben.

Der A-bewertete Freiausaug-Schalleistungspegel  $L_{WA5}$  nach DIN 45 635, Teil 38 kann über die relativen Schalleistungspegel genau ermittelt werden, oder nach folgender Berechnung näherungsweise bestimmt werden:

$$L_{WA5} \approx L_{WA6} - 6 \text{ dB}$$

Der A-bewertete Gehäuse-Schalleistungspegel  $L_{WA2}$  nach DIN 45 635, Teil 38 kann über die relativen Schalleistungspegel genau ermittelt werden, oder nach folgender Berechnung näherungsweise bestimmt werden:

$$L_{WA2} \approx L_{WA6} - 17 \text{ dB}$$

Den A-bewerteten Schalldruckpegel  $L_{PA}$  in 1 m Abstand erhält man annähernd indem man vom A-Schalleistungspegel 7 dB(A) abzieht:

$$L_{PA(1m)} \approx L_{WA2} - 7 \text{ dB}$$

Zu beachten ist, dass Reflexionen und Raumcharakteristik sowie Eigenfrequenzen die Größe des Schalldruckpegels unterschiedlich beeinflussen. Um Körperschallübertragungen auf ein angeschlossenes Kanalsystem zu vermeiden, empfehlen wir den Einsatz unserer flexiblen Kanalverbindungsstücke.

Für genauere Berechnungen bei Schallschutzmaßnahmen ist der Schalleistungspegel der Oktavbänder (A-bewertet) von Bedeutung, welcher wie folgt ermittelt wird:

$$L_{WAokt} = L_{WA6} + L_{WArel}$$

Die relativen Oktav-Schalleistungspegel  $L_{WArel}$  bei den Oktav-Mittelfrequenzen sind den Leistungskurven des Ventilators zu entnehmen. Sie sind bei 0,5 x Vmax ermittelt worden.

### Design features

RF-series tube fans are centrifugal fans with circular connections at inlet and outlet sides. Both sides can easily be fitted into the tube by means of RSV fastening clamps.

#### Casing

The housing is made of galvanized sheet steel. The fans correspond to protection class IP 44

#### Motor

RF fans are fitted with a 3-step single-phase motor.

#### Control unit

For simple set-ups a step switch is sufficient. A more sensitive control can be achieved by standard controllers for single phase AC.

#### Installation

The RF-type inline tube fans are directly mounted into the tube and fixed by clamps. Due to it's very low height the RF-type is ideal for use in false ceilings.

#### Fan performance curves

The performance curves in this catalogue have been established using the inlet test method in the test chamber according to DIN 24 163, mounting position B. The curves indicate the static pressure increase  $\Delta p_{ia}$  as a function of the volume flow.

### Sound levels

The figures quoted in the performance curves are the "A" decibel figures which are the sound power levels  $L_{WA6}$  at the outlet side in duct systems.

The "A" sound power level at the inlet side  $L_{WA5}$ , according to DIN 45 635, part 38, can be calculated via the relative sound power levels (see below) or is obtained approximately as follows:

$$L_{WA5} \approx L_{WA6} - 6 \text{ dB}$$

The "A" casing sound power level  $L_{WA2}$ , according to DIN 45 635, part 38, can be calculated via the relative sound power levels (see below) or is obtained approximately as follows:

$$L_{WA2} \approx L_{WA6} - 17 \text{ dB} - \text{for EKN or DKN}$$

$$L_{WA2} \approx L_{WA6} - 25 \text{ dB} - \text{for EKNS or DKNS}$$

The "A" sound pressure level  $L_{PA}$  at a distance of 1 metre is obtained approximately by deducting 7 dB(A) from the "A" sound power level.:

$$L_{PA(1m)} \approx L_{WA2} - 7 \text{ dB}$$

It is important to note that reflexion and environmental characteristic as well as natural frequencies differently influence the sound pressure levels. In order to avoid structure-borne noise transfer to a connected duct system we recommend the use of flexible duct connection.

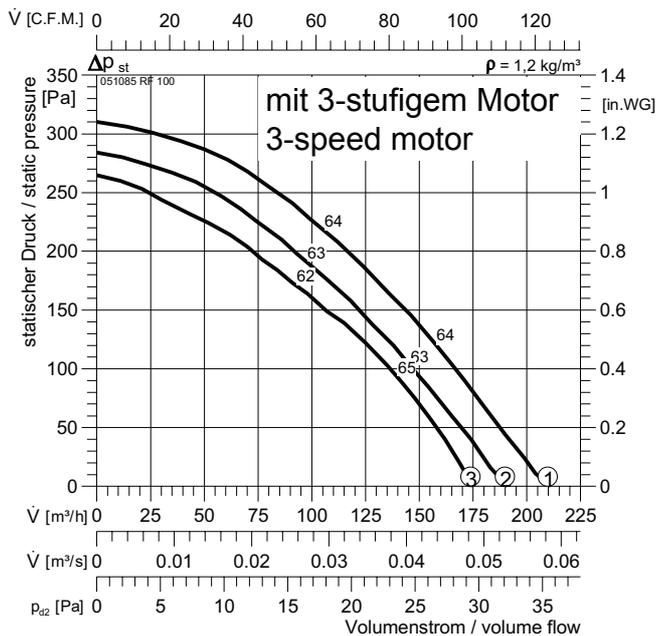

The A-weighted octave sound power level is important for the choice of suitable sound attenuators. It is obtained as follows:

$$L_{WAokt} = L_{WA6} + L_{WArel}$$

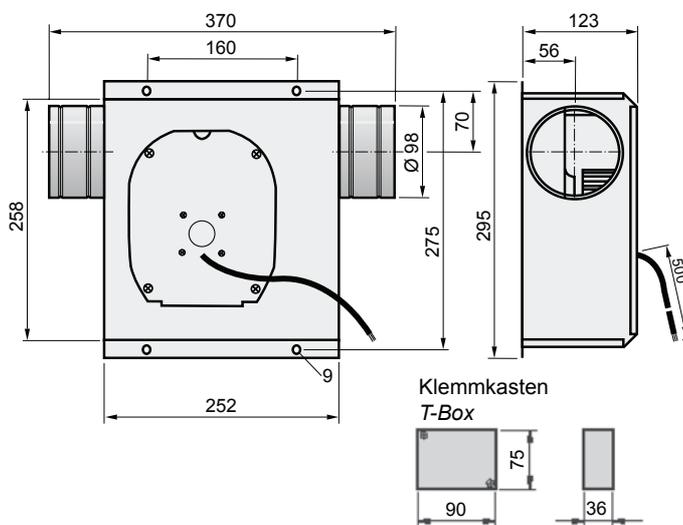

The relative octave sound power level  $L_{WArel}$  at octave medium frequency can be taken from the tables at respective fan. These levels has been established at 0.5 x Vmax.

### Eigenschaften und Ausführung

Rohrventilatoren vereinen die Vorteile des Axialventilators - gerade Durchströmung und einfache Montage - mit der hohen Druckstabilität, niedrigem Schallniveau und ausgezeichnetem Wirkungsgrad des Radialventilators.

#### Gehäuse

##### Kunststoff-Ausführung:

Die Größen RK 100 - 315 haben ein formschönes, schlagfestes, schwer entflammables, hellgraues Kunststoffgehäuse mit integriertem Klemmkasten in Schutzart IP44 und Nachleitwerk.

##### Stahl-Ausführung:

Die Größen RS 100 - 355 und ERM / DRM 315 - 500 haben ein pulverbeschichtetes Gehäuse aus Stahlblech.

#### Laufrad

Es werden rückwärts gekrümmte Radiallaufräder aus Stahlblech eingesetzt.

Die Laufräder sind direkt auf die Rotoren der Außenläufermotoren aufgebaut und zusammen mit diesen entsprechend Gütestufe G 2,5 nach DIN ISO 1940 auf zwei Ebenen gewuchtet.

#### Motor

Der Antrieb erfolgt durch einen im Radialrad eingebauten Außenläufermotor der Schutzart IP 44. Die elektrische Ausführung entspricht der VDE 0530, Isolierstoffklasse B mit zusätzlicher Feuchtschutzimprägnierung. Ab Größe RK 150 mit Temperaturwächler in der Wicklung verschaltet. Die Lieferung erfolgt montagebereit in Einzelkartons.

#### Elektrischer Anschluss

Die Motoren sind auf einen außen am Gehäuse angebrachten Klemmkasten verdrahtet.

### Luftleistungskennlinien

Die Kennlinien für diese Typenreihe wurden in Einbauart B (frei ansaugend, druckseitig angeschlossen) aufgenommen und zeigen die statische Druckerhöhung  $\Delta p_{st}$  als Funktion des Volumenstroms. Der dynamische Druck  $p_{d2}$  ist auf den Flanschquerschnitt am Ventilatoraustritt bezogen.

### Schallentwicklung

Die Ermittlung der Schalleistungspegel erfolgt nach dem Hüllflächenverfahren nach DIN 45 635, Teil 38.

In den Kennlinien ist der A-bewertete Freiblas-Schalleistungspegel  $L_{WA6}$  nach DIN 45635, Teil 38 angegeben. Der A-bewertete Freiansaug-Schalleistungspegel  $L_{WA5}$  nach DIN 45 635, Teil 38 wird wie folgt ermittelt:

$$L_{WA5} = L_{WA6} - 3 \text{ dB(A)}$$

Der für die Auslegung von Schalldämpfern maßgebende Schalleistungspegel in den einzelnen Oktavbereichen kann aus folgender Formel ermittelt werden:

$$L_{WAOKt} = L_{WA6} + L_{WArel}$$

Die relativen Oktav-Schalleistungspegel  $L_{WArel}$  bei den Oktav-Mittelfrequenzen sind den Tabellen des Ventilators zu entnehmen. Sie sind bei  $0,5 \times V_{max}$  ermittelt worden.

Den A-bewerteten Schalldruckpegel  $L_{pa}$  in 1m Abstand erhält man annähernd, indem man vom A-Schalleistungspegel  $L_{WA}$  7 dB (A) abzieht.

Zu beachten ist, dass Reflexionen und Raumcharakteristik sowie Eigenfrequenzen die Größe des Schalldruckpegels unterschiedlich beeinflussen.

### Design features

Tube fans unite the advantages of the axial fan - straight airflow and easy installation - with the high pressure stability, low noise level and high efficiency of centrifugal fans.

#### Casing

##### Plastic casing:

The housing of the RK tube fans is made of a sturdy and flame retardant light grey plastic material and is fitted with an integrated terminal box and guide vane.

##### Steel casing:

Casings of sizes RS 100-355 and ERM / DRM 315 - 500 are made of powder coated sheet metal.

#### Impeller

Backward-curved centrifugal impellers made of sheet steel or plastic. The impellers are fitted directly onto the external rotor motor. The motorized impeller unit is balanced in two planes to quality level G 2.5 (DIN ISO 1940).

#### Motor

WOLTER tube fans are driven by an external rotor motor of protection class IP 44, fitted within the radial impeller. The electrical connection is according to VDE 0530, insulation material class B with additional moisture impregnation. From size RK 150 up to size 315, all units are equipped with thermal contacts inserted in the motor winding. Fans are delivered ready for installation in individual boxes.

#### Electrical connection

The motors are wired to an external terminal box.

### Fan performance curves

The performance curves for these fan types have been established in mounting position B (connected on the pressure side and open on the suction side) and show the static pressure rise  $\Delta p_{st}$  in reference to the volume air flow. The given dynamic pressure  $p_{d2}$  refers to the flange cross-sectional area at the outlet side of the fan.

### Sound levels

The ascertaining of the sound level follows the enveloping surface method according to DIN 45 635 section 38.

The data tables show the A-weighted sound power level  $L_{WA6}$  at the outlet side, unducted, in decibel figures.

The A-weighted sound power level at the inlet side  $L_{WA5}$  according to DIN 45 635, part 38, is obtained as follows:

$$L_{WA5} = L_{WA6} - 3 \text{ dB(A)}$$

The octave sound power level is important for the choice of suitable sound attenuators. It is obtained as follows.

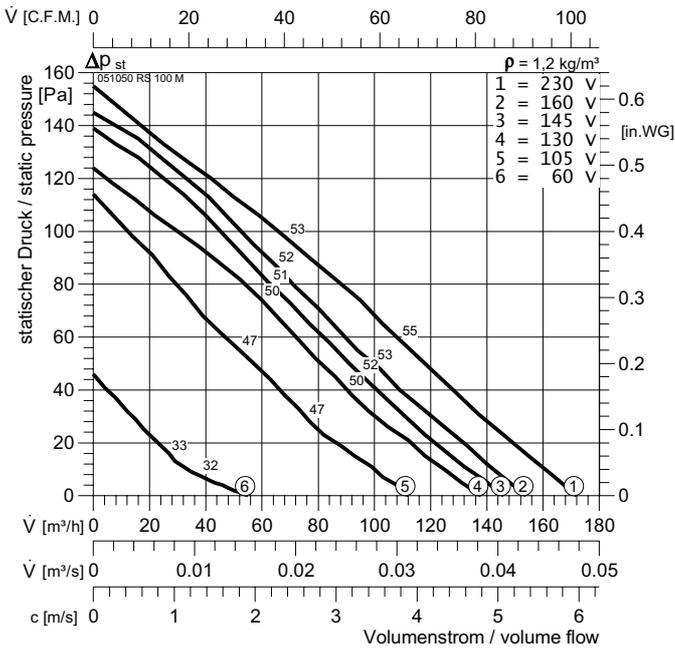

$$L_{WAOKt} = L_{WA6} + L_{WArel}$$

The relative octave sound power level  $L_{WArel}$  at octave medium frequency can be taken from the tables at respective fan. These levels has been established at  $0.5 \times V_{max}$ .

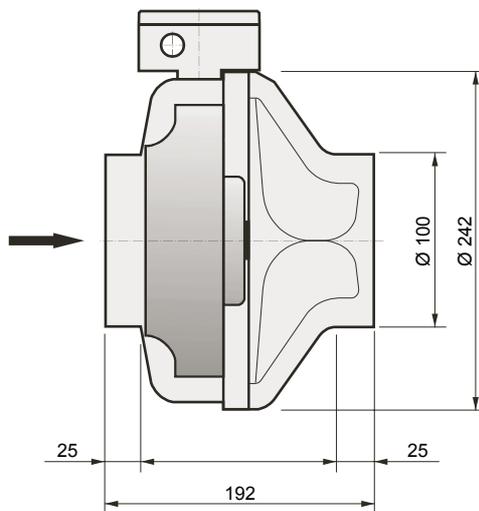

The A-weighted sound pressure level  $L_{pa}$  at a distance of 1 metre is obtained approximately by deducting 7 dB(A) from the A-weighted sound power level  $L_{WA}$ .

It is important to note that reflexion and room characteristics as well as natural frequencies differently influence the sound pressure levels.
